

Documents don't just contain data. They contain decisions.

JARD — Agentic Document Intelligence Platform

“Documents don't just contain data. They contain life-changing decisions.

Solving cross-document discrepancies at the CASE level, not just isolated document extraction.

The Example Problem

Case Study: Government Citizen Application

A citizen applies for a welfare grant submitting 3 documents: Citizen Application, Income Certificate, and Tax Return.

CONTRADICTION DETECTED

Application Income: ₹1,00,000 | Tax Return: ₹2,50,000

Traditional OCR handles PDF to JSON for individual files, but fails to reason across contradictions. Case workers spend 45 mins manually cross-checking filings.

THE PROBLEM

PDF → JSON isn't the hard part.

TRADITIONAL PIPELINE

SAME CASE — THREE DOCUMENTS

“What happens when the truth is spread across multiple documents?”

Traditional extraction can read each document. **JARD can reason across them.**

DIFFERENTIATION

Traditional Document AI

Azure Doc AI, Google Doc AI, Amazon Textract focus on isolated document extraction.

- ✗ Processes single files in isolation
- ✗ Misses cross-document contradictions
- ✗ Requires manual human reconciliation

JARD Case Intelligence

Operates at the CASE level by linking multi-document relationships and reasoning across filings.

- ✓ Multi-doc relationship mapping
- ✓ Automatic discrepancy reasoning
- ✓ Drafts explainable next-action steps

Meet JARD.

An agentic document intelligence system that turns documents into explainable actions.

From document processing to decision intelligence.

THE PRODUCT

A case file that explains itself.

TECHNICAL DIFFERENTIATOR

**Exasol isn't just where the data lives.
It's part of the trust model.**

Natural language never gets direct database access. Read-only access is enforced at the database level.

Agentic doesn't mean autonomous without control.

01

CONFIDENCE GATE

Low-confidence extraction is routed to human review.

02

HUMAN APPROVAL

Actions are drafted, not automatically sent.

03

AUDITABILITY

Agent decisions and overrides are recorded in AUDIT_LOG.

READ-ONLY CHAT

Natural-language database queries are validated and executed using a dedicated read-only Exasol identity.

AI proposes. **Humans approve.** **Exasol records.**

One case. Three documents. One decision.

ASK JARD

"Which cases currently have unresolved discrepancies?"

The reusable primitive is not OCR.

It is trustworthy reasoning over a document case.
